Candace Currie is Chair of Child and Adolescent Health and founding Director of the Child and Adolescent Health Research Unit (CAHRU) which is based within the School of Medicine, University of St Andrews, Scotland.

Candace has been the elected International Coordinator of the Health Behaviour in School-Aged Children Study (HBSC) since 1995 and heads HBSC International Coordinating Centre at CAHRU. She chairs the HBSC International Scientific Development Group; the HBSC International Coordinating Committee and the International PI Assembly. She is a member of the HBSC Social Inequalities Focus Group. Her research interests are in social determinants of health among children and adolescents and in particular socioeconomic inequalities; and also in developmental aspects of adolescent health and especially puberty. She held an EC BIOMED II grant of the Control of Adolescent Smoking from 1998-2001 and coordinated this project. The CAS study investigated the relationships between national tobacco policies, school smoking policies and adolescent smoking in eight European countries: Austria, French-speaking Belgium, Denmark, Finland, Germany, Norway, Scotland and Wales.

with Professor John Lynch as ‘discussant’
